

# Technical Documentation Device Cloud

powered by TestChameleon™

Welcome to the technical documentation for automated and manual testing powered by TestChameleon™. TestChameleon™ is a cloud based SaaS solution by [Testbirds](#), which enables you to easily test your software products in many different environments.

Before you can start your manual or automated tests you need a Device Cloud package. You have two options to get started:

**Option 1: Sign up for our 7-day free trial and test on all devices.**

**Option 2: Buy a package**

As soon as you have a package you can start your manual or automated test. Jump right into technical instructions:

## Section overview

- **Manual Testing** explains how TestChameleon can be used to perform manual tests via VNC.
- **Automated Testing** explains how TestChameleon can be used to perform automated tests via Selenium, Appium and the TestChameleon API.
- **FAQ** answers the most common questions you might have reading this documentation.
- **Code Examples Library** contains links to our example projects, which you can use as a starting point.
- **Additional Resources** contains pages which explain a wide range of additional topics.
